Education

Maharana Pratap Engineering College, Kanpur
B.Tech in Computer Science (AI & ML); CGPA: **8.3/10**

(Sep 2023 – May 2027)

St. Thomas School, Kanpur
Class XII: **92.5%** (2023) — Class X: **94.2%** (2021)

Technical Skills

- **Languages:** Java, Python, SQL
- **Technologies:** Node.js, React.js, REST APIs, OOP, AWS cloud
- **Tools:** Git, GitHub
- **Core CS:** Data Structures & Algorithms, DBMS, Operating Systems
- **Databases:** MySQL, MongoDB

Projects

CampusIQ – Intelligent Candidate Ranking Platform **2026**
React.js, Node.js, MongoDB, REST APIs

 <https://github.com/CampusIQ>

- Built a candidate intelligence platform that aggregates academic records, coding profiles, GitHub activity, and resume data to automate student shortlisting for placement drives.
- Developed an AI-based resume parsing pipeline using LLMs to extract technical skills, projects, achievements, and domain expertise from unstructured resumes.
- Implemented a role-specific ranking engine that analyzes LeetCode performance, GitHub contributions, resume relevance, and skill matching to recommend the most suitable candidates for recruiter requirements.

Dupeify-Browser Extension for Finding Product Alternatives **2026**
react.js, Plasmo, Node.js, Pinecone Vector Database

 <https://github.com/Dupeify>

- Developed an AI-powered browser extension that identifies affordable perfume dupes from ecommerce websites using semantic similarity search.
- Implemented webpage product extraction for titles, images, descriptions, and brand metadata using DOM parsing techniques.
- Designed a lightweight React + Plasmo Framework extension interface for displaying personalized dupe recommendations.

DineSync – Distributed Dining Operations Platform **september 2025**
MERN Stack

 <https://github.com/DineSync>

- Identified overcrowding and inefficient meal allocation as a recurring campus issue, and designed a capacity-aware dining coordination platform to streamline student dining flow.
- Planned user workflows for meal scheduling, slot allocation, and real-time occupancy tracking to improve dining experience and reduce wait times.
- Collaborated on scalable backend and synchronization logic to reduce operational bottlenecks during high-traffic periods.

Achievements & Certifications

- Solved **450+** algorithmic and data-structure problems on **Leetcode**, demonstrating strong analytical and problem-solving skills.
- **NPTEL Java Programming** — **Elite + Silver (Score: 67.5/75)** — Ranked in the **top percentile** of a national-level 12-week certification course.
- **Runner-up** — **Build for Bharat Hackathon (852 teams nationwide)** — *Led a 3-member team* to design and deliver a scalable, data-driven solution, securing **2nd place nationally**.
